DEPLOYABLE ANIMAL WELFARE SYSTEM

Global Defence Solutions' (GDS) versatile Deployable Animal Welfare System (DAWS) provides remote care for displaced animals.

The DAWS provides versatile, spacious and hygienic shelter for animals during evacuation situations. Transported as a single Type 1C Container, the system deploys rapidly by two personnel in under 30 minutes into a structure more than three times the footprint of the container, giving each animal a large separate run space and individual sleeping area.

A large utility area provides space to inspect and treat animals within an air conditioned environment. An additional sun shield can be fitted over the structure giving higher levels of comfort to animals and handlers.

EASY TO DEPLOY

Constructed within a single Type 1C Container using lightweight components for quick and easy deployment by just two personnel.

MAXIMUM HYGIENE

Integrated wall-mounted tap, sink, water heater, sealed walls, bunded sealed floor and drainage system delivers high level of hygiene.

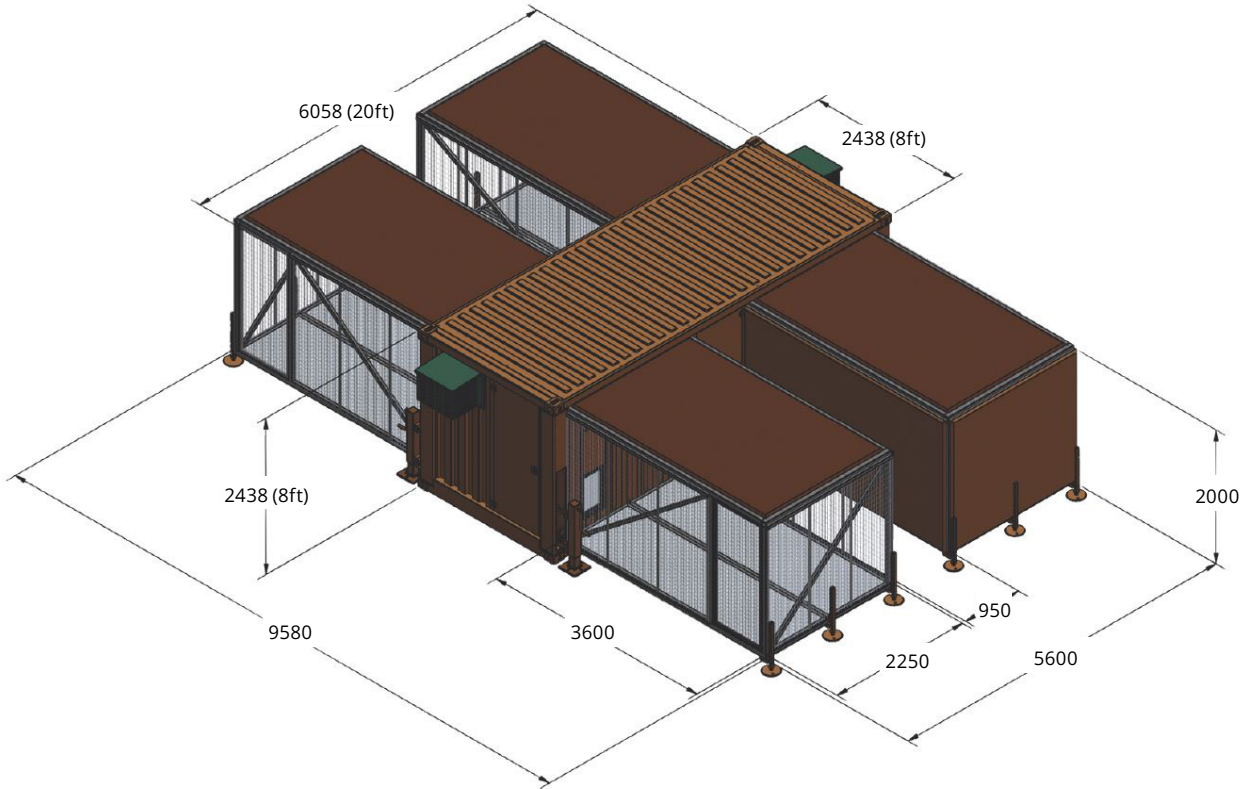

COMFORTABLE CLIMATE

Fitted with PVC canvas sunshield and air conditioning units, each deployable animal welfare system provides a constant, comfortable temperature.

INTEGRATED ANIMAL RUN AREAS

Four generous 8m² run areas and spacious individual sleeping pens for each animal, with quarantine capability if an animal requires confinement due to sickness.
